

HoubaraTracker REST API Documentation

1. Authentication

All API requests require a Bearer token in the Authorization header. Tokens are generated via Firebase Auth and have a TTL of 1 hour.

2. Endpoints: Transmitters

GET /api/v1/transmitters - Retrieves all active transmitters.

POST /api/v1/transmitters - Registers a new PTT.

3. Endpoints: Positions

GET /api/v1/positions?birdId={id} - Retrieves the location history for a specific bird. Supports parameters: startDate, endDate, limit.

4. Rate Limiting

The API is rate-limited to 100 requests per minute per IP address to prevent abuse and manage Argos API quotas.
