

Asian Houbara Conservation Status 2024

1. Executive Summary

The 2024 report highlights a stabilization in specific managed populations of the Asian Houbara, though the global trend remains vulnerable due to poaching and habitat loss.

2. Tracking Outcomes

Data from HoubaraTracker shows that 85% of tracked birds successfully completed their spring migration. Survival rates in protected wintering zones increased by 12% compared to 2023.

3. Threat Analysis

Illegal hunting and unregulated development in the wintering grounds continue to be the primary threats. Geofencing alerts in the platform have helped intercept 4 high-risk movements.
