

Transmitter Deployment Protocol

1. Pre-deployment Checklist

Ensure the PTT battery is fully charged (minimum 3.8V). Register the Transmitter ID and Hex Code in the HoubaraTracker database before field deployment.

2. Harnessing Technique

Use a Teflon ribbon harness (backpack style). Ensure a snug fit that allows two fingers to pass under the ribbon at the breast. The total weight of the transmitter and harness must not exceed 3% of the bird's body weight.

3. Activation

Remove the magnetic switch to activate the transmitter. Monitor the initial Argos passes on the HoubaraTracker "Live Tracking" view to confirm successful data transmission before release.
